PROFESSIONAL SUMMARY

Analytical Data Professional with 3+ years of experience leveraging **SQL, Python, and Snowflake** to transform complex datasets into actionable business intelligence. Proven track record in **Data Governance, Metric Modeling, and ETL automation** within high-scale supply chain environments. Expertise in bridging the gap between raw technical data and executive-level decision-making. Currently specializing in **AI Model Evaluation (RLHF)** to ensure data integrity and factual alignment in Large Language Models.

Technical Expertise

- **Data & Analytics:** SQL (PostgreSQL, Snowflake, CTEs), Python (Pandas, NumPy), DuckDB, Exploratory Data Analysis (EDA), Metric Modeling, Data Cleaning & Governance.
- **Visualization & BI:** Tableau, Power BI, Streamlit, Plotly, Dashboard Design & Maintenance.
- **Data Engineering:** ETL Pipelines, Schema Validation, Data Contracts, Docker, FastAPI, REST APIs.
- **AI & GenAI:** RLHF Workflows, RAG, LangChain, LangGraph, RAGAS Evaluation.
- **Machine Learning:** Linear/Logistic Regression, Decision Trees, Scikit-learn, PyTorch.
- **Tools:** Excel (Advanced), Git/GitHub, Google Apps Script.

Professional Experience

AI Model Evaluation Analyst (RLHF) | Cohere (Contract)

Sep 2025 – Present

- Evaluated 500+ LLM outputs using RLHF workflows, identifying hallucinations, reasoning failures, and safety risks in model responses.
- Performed structured analysis of prompt–response behavior to improve model reliability, alignment, and factual consistency.

Data Analyst | Automation Technician | HelloFresh | Toronto, ON

Jan 2023 – Aug 2025

- **Data Quality & Governance:** Acted as a data steward for high-volume supply chain telemetry; developed and maintained automated data validation scripts in **Python** to flag integrity issues in datasets feeding downstream **Snowflake** pipelines, reducing reporting errors by **~25%**.
- **Business Intelligence (BI):** Designed and maintained executive-facing **Power BI and Tableau** dashboards tracking operational **KPIs** (fulfillment rates, downtime attribution), applying **metric modeling** to transform raw sensor logs into actionable insights for leadership teams.
- **Advanced Analytics:** Conducted **Exploratory Data Analysis (EDA)** and **anomaly detection** on machine event logs (150K+ daily rows) to perform root-cause analysis on distribution bottlenecks, saving **20+ hours** of weekly manual troubleshooting.
- **ETL & Automation:** Built **SQL-based** data pipelines and **Google Apps Script** automations to synchronize production data with workforce attendance forecasts, improving reporting turnaround from **~2 days** to **same-day delivery**.
- **Stakeholder Collaboration:** Partnered with **Finance and Operations** teams to align on **data contracts**, metric definitions, and reporting requirements, ensuring analytics outputs directly supported supply chain optimization and cost-reduction goals.

Key Projects

Agentic Analytics System (NL-to-SQL BI Engine) | Python, SQL, DuckDB, FastAPI, LangGraph

- Built a local-first analytics application that ingests arbitrary CSV datasets and answers business questions using **SQL-backed analysis**, automated validation, and chart generation.
- Designed a modular analytics workflow using a shared state model, enabling reusable steps for **data ingestion, schema grounding, SQL execution, visualization, and summarization**.
- Implemented **schema-aware SQL generation, sanitization, and retry logic**, improving robustness against schema mismatches and malformed queries.
- Improved answer faithfulness from **0.6 to 0.91** by iterating on retrieval strategy and similarity scoring; validated results using **RAGAS evaluation**.

Job Market Data Analysis | Python, SQL, Tableau

- Built and analyzed a large dataset (**200K+ rows**) to study job market trends using SQL and Python.
- Applied data quality checks (range limits, missing values, threshold validation) prior to analysis.
- Created dashboards and reports to visualize distributions, trends, and segment-level insights.

Education & Certifications York University: Bachelor of Arts (Honours) Information Technology 2022 – 2025

- Relevant Coursework: Data Analytics, Database Systems, Statistics, SAP ERP, UI/UX Design

Certifications:

- Tableau Desktop Specialist (Oct 2025)
- AWS Cloud Practitioner (Oct 2025)
